-  Bicycle & Sidewalk
-  Fountain
-  Proposed Park

Street Lights

Solar powered high efficiency street lights are proposed to be installed. The site currently has a liittle or no street lights to illuminate. Installation of these lights is a must as it concerns the safety of the residents and will also prevent accidents.

Bus Station

The existing bus stop is in bad shape, The new proposed bus stop is has an innovative design. Solar panels, trash cans, better seating arrangements are some of the main feature of the new designed bus stop. Instalation of Street lights and security camera is planned as well for the prevention of crime.

Public seating

The existing seating condition in the area is poor. The new proposed seating arrangement will consist of sustainably designed seating objects. These object will be most be made of recycledmaterials such as plastic. In some places Parklets are also proposed to ensure sustainability.

Gardens and Plantation

However the place is full of green trees and forest cover is high however, it lacks the colorful gardens which will improve the natural scenery even more.

Recreational Spaces

Despite of having abundant nature around the area still lacks many recreational elements such as playground and park. Integrating these recreational elements with the existing nature is Ideal solution for the place. Use of recycled materials for the construction of playground and seating is planned for this place. Use of solar panels in various parts of this area is planned to illuminate the space at dawn. Installation of security camera is also important to prevent crime.

Sculptures and fountains

Installation of sculpture in various spots which represent the identity of the place and help create awareness of mental health and its impact on lives. These sculpture will convey a message about mental health and will be also be good to look at from an artistic point of view.

Use of fountain is also planned to be installed along the sculpture.
